SYNOPSIS??The Olson Penis,? a transplanted anti-rejection penis using each man's stem cells and skin grafts was created 10-years ago to give men sexual freedom. Dating back to Neolithic times, men's penises grew for procreation when a woman ovulated and retracted immediately. 200 years ago, devoutly religious men in monogamous, married relationships with women experienced penile growth for procreation only. Conversely, women have always been born with vaginas and sexual freedom not governed by religion or politics. In February, a committee of women met to discuss ?The Olson Penis? being covered by Obamacare.
